Ping Statics for 142.251.221.174
Packet: Sent = 4, Received = 4, Lost = 0

Approximate round trip times in
milli-sec
Min = 7ms, Max = 32ms, Avg = 13ms
```

```
import java.net.InetAddress;
import java.util.Scanner;
public class Myping {
public static void main
(String args[]) {
Scanner sc = new Scanner(
System.in);
System.out.println("Enter
hostname as IP address");
String host = sc.nextLine();
try {
InetAddress address = Inet
Address.getName
```

```
System.out.println("ping
long startTime =
System.currentTimeMillis
if (reachable)
{
System.out.println("Host
is rea");
else
{
System.out.println("
time out");
}
catch (Exception e)
System.out.println("Error"+
e.getMessa
sc.close
}}

Exp-13 Implementation of Ping Program

Aim:-

To write a Java Program to Ping a hostname or Ip address using the Inet address class and check whether the host is reachable, along with respond time

Procedure:-

1. open a Java IDE or terminal and create a file named Myping.java.
2. Import Inet Address and Scanner classes
3. Get the hostname (or) Ip address from the user.
4. Get Inet Address getByName() to obtain the Ip address.
5. Use isReachable (3000) to check whether the host is reachable with 3 seconds.
6. Calculate and display the respond time in milliseconds.
7. Repeat the Ping 4 time with a 1 second delay b/w each attempt.
8. Display reply from if the host is reachable, otherwise display Request time out.
9. Compile and execute the Program.

Result:-

The Java Program was Successfully executed to Ping given hostname/Ip address It displays whether the host is reachable and shows the respond time.

Scanned with OKEN Scanner
