Exp-15 Analyze different type of Servers using Webalizer

Aim:-
To analyze different type of web Server using Webalizer and web log analysis tool in fedora.

Objective:-
* To understand web Server log files
* To Configurate webalizer for Server log analysis
* To Analyze the no of visitors, requests Pages, files and data transfered
* To Compare the usage Stastics of different web Server such as Apache, Nginx and IIS.

Procedure:-
1. Install webalizer /var/log/apache2/access.log
For Nginx
1. http://localhost/webalizer
2. repeat the same Procedure for the log files (or) different Servers.

Result:-
The webalizer tool Successfully analysis web Server log files and generates graphs and Statistical reports. The generated reports can be used to compared the traffic, request, visitor resource usage and data transfer of different web Server.
