TCP Echo Server listening on port 5000
Client Connected: 127.0.0.1:50503
Received: hi
Received: hi
Type message to send: hi
Server: Echo: hi
hi I am Harsath Abin V
Server: Echo: I am Harsath Abin V

```
Import java.io.*;
Import java.net.*;
Public class TCPEchoClient {
  Public static void main (String[] args
    String host = "localhost";
    int port = 5000;
    Socket socket = new Socket (host, port);
    BufferReader in = new BufferReader (
        new InputStreamReader ());
    PrintWriter out = new PrintWriter (
        Socket.getOutputStream(), true);
while (message = Keyboard.readline()) != null)
    out.println (message);
    String response = in.readline()
    System.out.println ("Server" + response
}
Socket.close();
```

Exp-12(a) Echo client - Server using Tcp

Aim:-

To Implement an Echo client-Server application using Tcp Sockets and Verify Communication b/w the client and Server

Procedure:-

1. Create a Tcp Echo Server using ServerSocket and Socket.
2. Assign a port number to the Server.
3. Compile and execute the Tcp Server Program.
4. Create a Tcp Echo client using Socket
5. Connect the client to the Server using the Server address and port number.
6. Enter a message through the client.
7. The Server receives the message and Sends it back to the client.
8. Display the echoed message at the client
9. Enter bye to terminate the Communication.

Result:-

Thus the Tcp Echo client-Server application was Successfully Implemented and the client Successfully received the echoed message from the Server.
