Expt-3a-Understanding the Cisco Tracer

Aim:-

To understand the Cisco Packet Tracer environment and design a simple computer network using its interface and network components.

Steps:-

Step 1:- Open the Cisco Packet Tracer Application.

Step 2:- Observe the user interface including the Menu Bar, Main Toolbar, Workspace, Common Tools Bar, Network Component Box, and Real Time / Simulation tabs.

Step 3:- From the Network Component Box, Select the required network devices such as Pcs, Hubs and Switch.

Step 4:- Drag and drop the devices into the Workspace.

Step 5:- Connect the devices using copper - Straight Through devices.

Step 6:- Configure Ip addresses for the Pcs using the desktop → Ip Configuration option.

Step 7:- Verify that all links are device (Green LED)

Step 8:- Use the Add Simple PDU tool to Send a Packet b/w two Pcs.

Step 9:- Observe Packet transmission in Realtime mode and Simulation mode.

Scanned with OKEN Scanner

Step 10:- Save the network topology.

Result:- The Cisco Packet Tracer environment was successfully explored and a simple network was designed. The interface components, device connections, IP configurations, and packet transmission were successfully understood using both Real time and Simulation modes.
