UDP Echo Server listening on port 6000
Received from 172.0.0.1:6552 -> Hi
Received from 172.0.0.1:6552 -> How are you?

Type message to send:
Hi
Server: Echo: Hi
Hi How are you?
Server: Echo: Hi How are you?

```
Import java.net.*;
Public class UDPEchoServer{
  Public Static Void main (String args[]
    Int Port = 5000;
    DatagramSocket Socket = new DatagramSo
                                (Port)
    byte [] buffer = new byte (1024);
    System.out.println("UDP Echo Server
    on Port");
While (true){
  Datagram Packet = Packet = new Datagr
  Packet ( response data, response da
  length; Packet.getAddress;
  packet.getPort();
  Socket.Send(response));
  If (message = Ignore Case ("bye")
    break;
}
  Socket.close();
  System.out.println("UDP Server
                    Stopped");
```

Ex12-b) Echo client - Server using UDP

Aim:-

To implement an Echo-client Server application using UDP Sockets and Verify Communication b/w client and Server.

Procedure:-

1. Create a UDP Echo Server using Datagram Socket and DatagramPacket.
2. Assign a Port number to the UDP Server.
3. Compile and execute the UDP Server Program.
4. Create a UDP Echo client using Datagram Socket and Datagram Packet.
5. Specify the Server address and Port number.
6. Enter a message through the client.
7. The client Sends the message as a UDP datagram to the Server.
8. The Server receives the Datagram and Sends the echoed message back.
9. Display the received echoed message at the client.
10. Enter bye to terminate the Communication.

Result:-

Thus, the UDP Echo client-Server application was Successfully Implemented, and the client Successfully received echoed message from the Server.
